AUTHOR: Anteyns, A.

TITLE: The Recovery and Treatment of Ferrous Metals in Ancient Latvia (Dobycha i obrabotka chernykh metallov v drevney Latvii)

PERIODICAL: Uch. zap. Latv. un-t, 1957, Vol 13, pp 177-202 (in Lettish, summary in Russian)

ABSTRACT: It is noted that the first object made of ferrous metals in the territory of Latvia appeared about 500 B.C. Archeological studies show that as early as the second to fourth centuries, the skills required to perform various operations in forging, welding, heat treatment, and carburizing of metals existed.

 Title : The Problem of Raising Calves of the Red-
 Steppe Breed to the Age of 4 1/2 Years in
 Serbia.
 Orig Publ : Arhiv biol. nauka, 1955, 7, No 1-2, 95-104
 Abstract : Sixty-five heifers were raised in Serbia to
 the age of 4 1/2 years. These heifers were born
 from animals purchased in 1944 in the Ukraine.
 Calves of this breed were born with a compara-
 tively high live weight (3.8 percent of their
 mother's weight). Their average live weight at
 birth amounted to 34.05 $\pm$ 0.84 kg, at six
 months of age to 124.67 $\pm$ 2.45 kg, at 12 months
 to 185.35 $\pm$ 3.01, at 18 months to 242.2 $\pm$ 4.42,
 at 24 months to 285.71 $\pm$ 6.36, at 36 months to
 358.25 $\pm$ 9.21, at 48 months to 381.40 $\pm$ 14.44.

TITLE: Polyphenyls in reactor engineering. II

PERIODICAL: Tehnika, no. 5, 1962, 846-852

TEXT: The article, a continuation of an article published in Tehnika, no. 4, 1960, deals with the thermal and radiation properties of aromatic hydrocarbons, particularly of polyphenyls, and their use as coolants and moderators in nuclear reactors. All the data contained in the article have been compiled from foreign publications and are based on experiments conducted at Harwell and on other existing reactors, such as OMRE, Piqua and OCCR. There are 4 tables, 6 figures and 23 references: 1 Soviet-bloc and 22 non-Soviet-bloc. The 4 most recent references to the English-language publications read as follows: E. F. Wiesner: Nuclear Engineering, 5, no. 45, 68, 1960; K. H. Campbell: Nuclear Engineering, 5, no. 45, 53, 1960; C. R. Tipton, edit.: Reactor Handbook, v. 1, Materi-

EXCERPTA MEDICA Sec 18 Vol 2/2 Cardiovas. Dis. 1974

736. The effects of thialbarbitone (Kemithal) on the myocardium. Correlation between E.C.G. and the serum potassium level. An experimental-clinical study. Miroslav Lj. ANIC R., VASILJEVIC D. and KIZALIC Lj. Inst. of Pathophysiol. Med. Fac., Univ. of Belgrade. *Acta med. rugosl.* 1969, 13:1 (62-75) Graphs 1 Tables 2

Results of the experimental and clinical investigations show that thialbarbitone (Kemithal) administered in doses just sufficient to induce a light degree of anaesthesia, causes a marked alteration in the ECG associated with a significant decrease in the serum potassium concentration. Sinus tachycardia, frequent occurrence of ventricular extrasystoles and occasional but definite shortening of P-R interval, have been observed to occur shortly after the administration of thialbarbitone. Subsequent progressive development of alterations in the terminal deflection was invariably associated with a significant decrease of the serum potassium level. ECG alterations consisted of ST segment depression, prolongation of the T wave, prolongation of the Q-T interval on account of T wave and U wave presence and prominence. A fairly good correlation between the degree of ECG abnormalities and the degree of hypopotassaemia could be observed. Extreme fall in the serum potassium concentration was found to be associated with progressive decrease of the P wave amplitude, the development of partial atrio-ventricular block, appearance of nodal rhythm and even of idioventricular rhythm. The ECG abnormalities described were observed in both patients and experimental animals, the only difference being the absence of the U wave in the latter. The possible mechanism of the hypopotassaemia, pathogenesis of electrocardiographic alterations, and practical implications of the data are discussed.
